

Project Name: Better Book Tracker

What It Does: Its a simple website where you can find books, save them, and keep track of your reading.

Goals:

- Make it easy to find and save books.
- Add books by hand if needed.
- Mark books as 'reading', 'finished', etc.
- Show your reading progress visually.
- Keep your book list even if you close the website.

Steps to Build It:

1. Start Off:
 - Prepare the project space.
 - Decide what the website needs to do.
 - Sketch out a rough look for the website.
- 2.
3. Make It Look Good:
 - Build the websites basic parts with HTML.
 - Use CSS to make it look nice.
4. Make It Work:
 - Connect to Open Library API to search for books.
 - Let users add or remove books.
 - Update the reading status of books.
 - Save the book list in the browser so it doesnt get lost.
5. Test & Fix:
 - Check if it works on different web browsers and gadgets.
 - Solve any problems found.
6. Wrap Up:
 - Write instructions or notes about your website.
